DROPSHOT

Preferred Mustad Hook:

DROPSHOT HOOK

Suspended Presentation
Fish slowly and vertically; shake or lightly jerk bait while keeping weight on bottom.

ATTACH WITH PALOMAR KNOT

(18" -22" ABOVE END OF LINE)

STEP 1

Create loop and insert in eye.

STEP 2

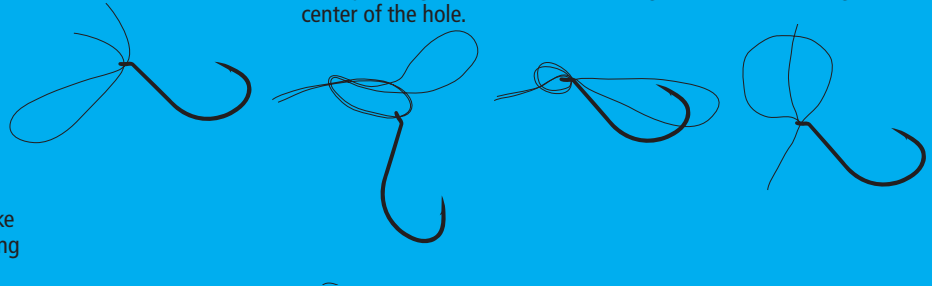

Bring loop behind the standing line and up through the center of the hole.

STEP 3

Pass the hook through the loop, wet knot and tighten.

STEP 4

Run tag end of line through hook eye. Attach weight.

HOODLUM®: 4X BAIT

SLOW DEATH HOOK – THE PRO'S SECRET

A Perspective on Perfection

In the mid-90's a close group of walleye pros were generating tremendous results with a new technique called Slow Death. Incredible action was being added to live-bait presentations by bending hooks in a certain fashion. I knew it was something special, but because I couldn't master the precise hook bend, I was getting really inconsistent results. Working with the Mustad Product Development Team, Keith and I spent countless hours testing hook bends until we perfected a hook design that anybody could rig effectively.

Gary Parsons – National Freshwater Fishing Hall of Fame Legendary Angler

TIPS FOR FISHING THE SLOW DEATH HOOK

Applications

This is a versatile, year-round Power Finesse presentation. It can be fished fast or slow, has the attractiveness of live bait and adds an irresistible action. The unique hook design creates an enticing corkscrew presentation. This is a slow bottom-bouncing presentation technique that lets you present the bait in cracks, crevices and little corners that faster blade presentations skip over.

Rigged with night crawler showing underwater action

To Rig

Attach a bottom-bouncer weight to your main line. Add a 4-6 foot, 10 lb monofilament leader and attach hook. Thread half a night crawler up the hook shank over the hook eye. There should be 1/4" to 1/2" of night crawler hanging off the hook.

To fish

Use your trolling motor and keep speeds from 1 mph to almost nothing. The key is to keep just enough speed so the crawler spins. Can also be used effectively when drifting.

KEITH KAVAJECZ

Professional Walleye Trail Champion
 "The revolutionary hook shape for a truly effective presentation."

To Move:

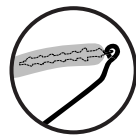

Unique sliding weight lets you easily change presentations.

1. Rotate weight several times to heat silicon insert.

2. Move weight to desired location.

As insert cools, weight will be held firmly in place.

Unique gripper design is easy to use; holds bait securely.

Weight Back:

Pushes bait backwards under structures like docks or logs. Use with tube baits, crawfish, and jerk baits.

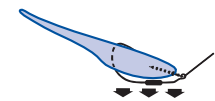

Weight Forward:

Bait sinks "nose down." Use with worms, "Gidzit" and tube baits.

Weight Centered:

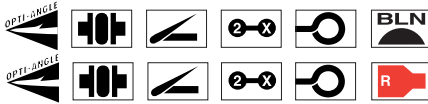

Bait falls horizontally. Use with jerk baits, tube baits, lizards and worms.

Ringed hooks rigging illustrations

Hooks rigged with action rings allow live bait such as sardines, anchovies and mackerel to swim more naturally than on a fixed hook. This draws more strikes on a slow bite and helps you boat more fish.

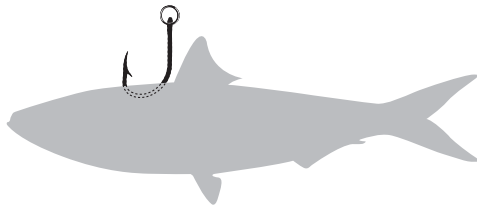

Butt, anal or tail hooking

Hook just behind vent and just inside anal fin. Helps your bait swim downward and away from the boat quickly. Since the hook is embedded in soft tissue, A light lob or underhand cast works best to keep the bait on the hook.

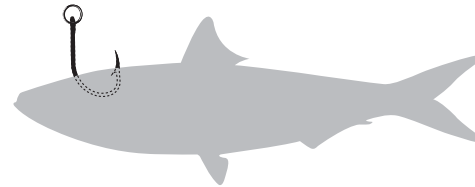

Back or neck hooking

For larger baits like sardines and mackerel, Hook crosswise behind the head. The Bait stays lively and the Hook stays secure for casting. Then the exposed point doesn't foul in the bait, which results in increased hookups. Some anglers prefer to move the hook rearward and hook the bait under the dorsal fin to provide a better anchor point.

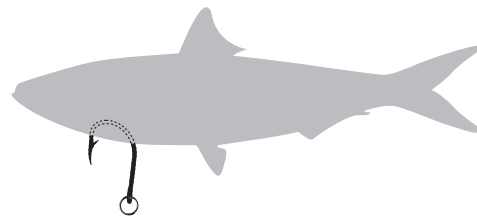

Collar hooking

Preferred method for anchovies and also used for small sardines. Bait is hooked through the collarbone immediately behind the gill plates. This method helps to keep small baits lively and swimming just under the surface.

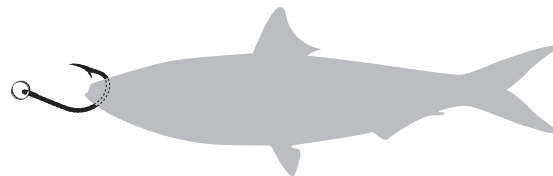

Heart or chest hooking

Hook shallow, crosswise through the breastbone or under pectoral fins. Don't hook too deep. Popular when fishing larger live baits, Like brownbaits, near or on the bottom with a sinker.

Nose hooking

Hook bait either crosswise through the nose or up through both lips. Harder tissue in the nose means your bait is less likely to come off during casting. Also allows swimming the bait back to the boat.

Hook sizes for live baits

	Anchovy	Sardine	Mackerel	Pinfish	Blue Runner	Pilchard
