

tri-shear™

Smooth, precise cut every time!

The unique patented design of the “tri-shear™” cutting mechanism prevents braided lines, mono and stranded cable from fraying. This keeps the line and cable intact and allows an easy and sure fit into a cable crimp. It does not leave any strands sticking out which minimizes the risk of injury to your hands. The patented design allows quick release of a fish by sliding the cutting barrel down the line to the cutting tip without handling the line.

The “tri-shear™” body is made of an aircraft quality 6061 billet (block) aluminum.

Internal hardware is made of durable corrosion resistant 303 stainless steel for fresh or salt water use.

- Cuts all brands of Kevlar and Spectra lines
- Cuts single strand wire and stranded cable
- Cuts Mono fishing line
- Cuts nylon lines

PATENT PENDING

**LIFETIME
WARRANTY**

NO FRAYING LINES!
