**Crossover Construction**

Innovation at its freshest...the new Trio spinning reels from Okuma feature a unique crossover construction. We took the best from aluminum construction and lightweight graphite materials and created a distinctive new concept in reel design. The solid one piece stamped aluminum reel stem and rotor arm are paired with lightweight graphite side plates and a rotor housing which provides strength where needed, and weight savings where possible. The Trio spool construction utilizes a multi-piece construction, housing the drag system in an Aluminum Drag Chamber for added stability and smoothness, while utilizing a lightweight graphite housing for weight reduction and distinctive styling.
